True North Systems

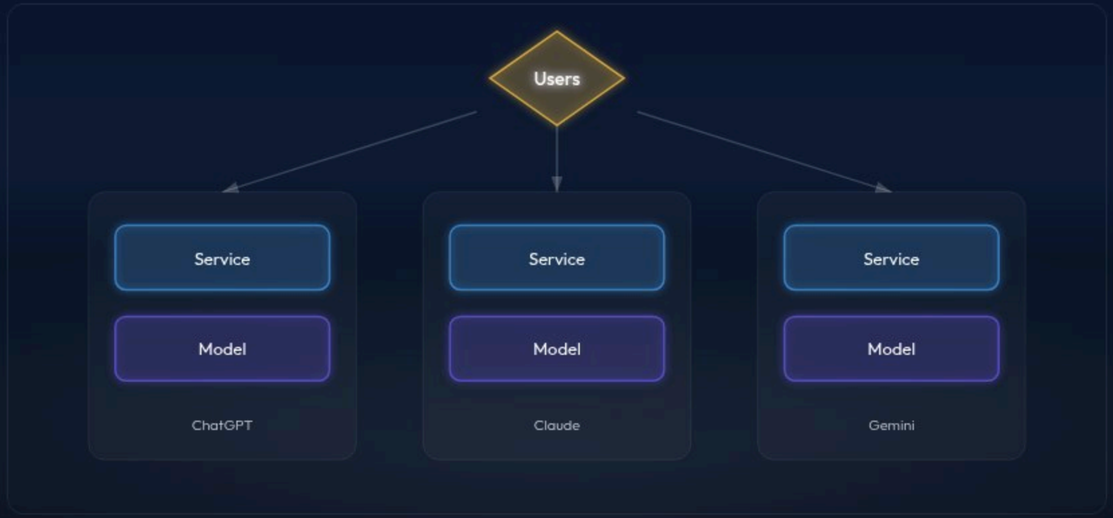
Trust and Continuity for the AI Era

Marcus Rydberg · Houston / Sweden · 2026

THE PROBLEM

The Current AI World

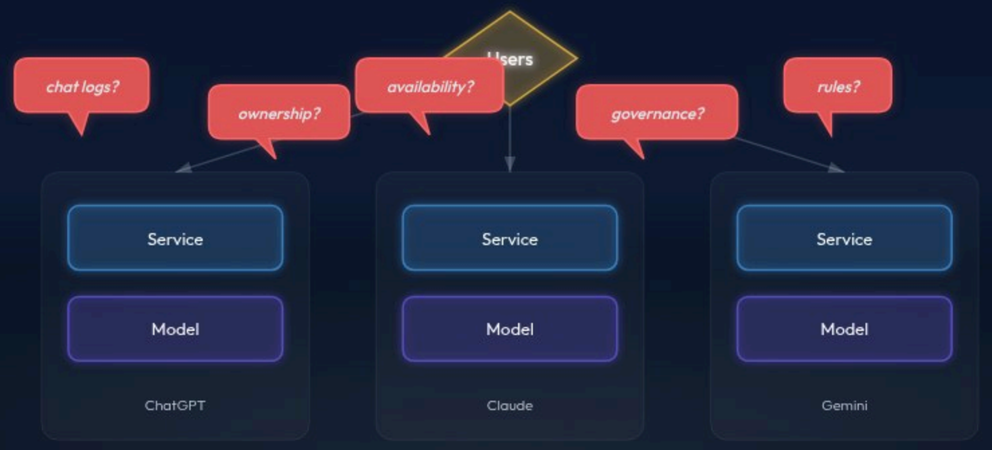
Users connect to multiple AI services, each bundling its own service logic, models, and opaque storage. Nothing connects them. Nothing persists across them.



> *AI is accelerating. Continuity is fragmented.*

THE QUESTIONS NO ONE ANSWERS

The Structural Gaps



Who owns the memory?

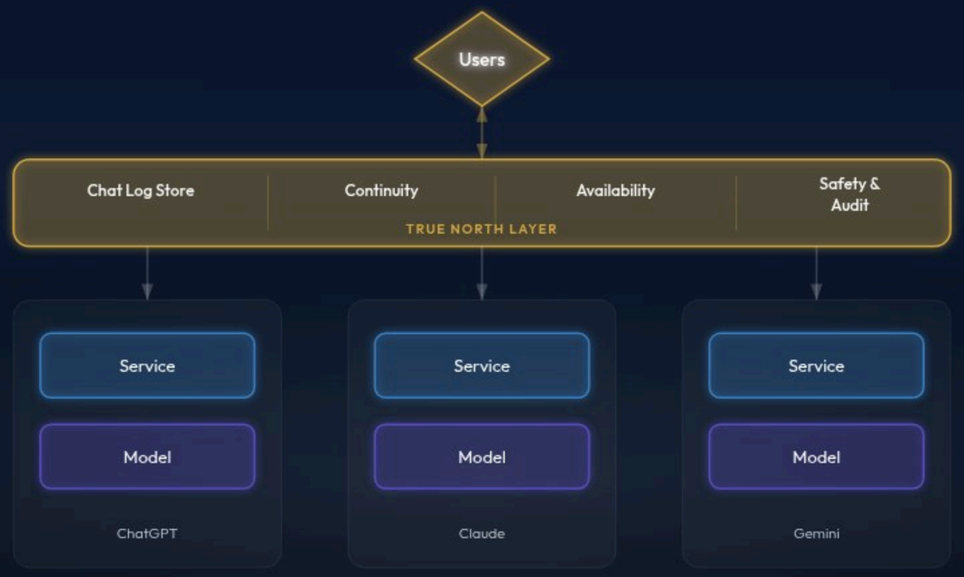
AI interaction is becoming cognitive infrastructure. There is no continuity layer.

CORE THESIS

> We provide trust and continuity for human–AI interaction — turning AI conversation history into a durable, ownable memory layer.

THE SOLUTION

Insert the Missing Layer



Persistent · Cross-provider · Governed · Portable

STAKES

Why This Matters

AI INTERACTION IS

- Deeply personal
- Increasingly professional
- Shaping thought
- Structuring decisions

TODAY IT IS

- Fragmented
- Disposable
- Vendor-locked
- Ungoverned

> *Memory without continuity erodes trust.*

FIRST EXPRESSION: CONSUMER

True North Family Chat

A sovereign AI continuity app.

CORE CONTINUITY

- Encrypted personal memory vault
- Sovereign AI chat archive
- Cross-provider continuity
- Model portability
- Local + distributed redundancy

GOVERNANCE EXTENSIONS

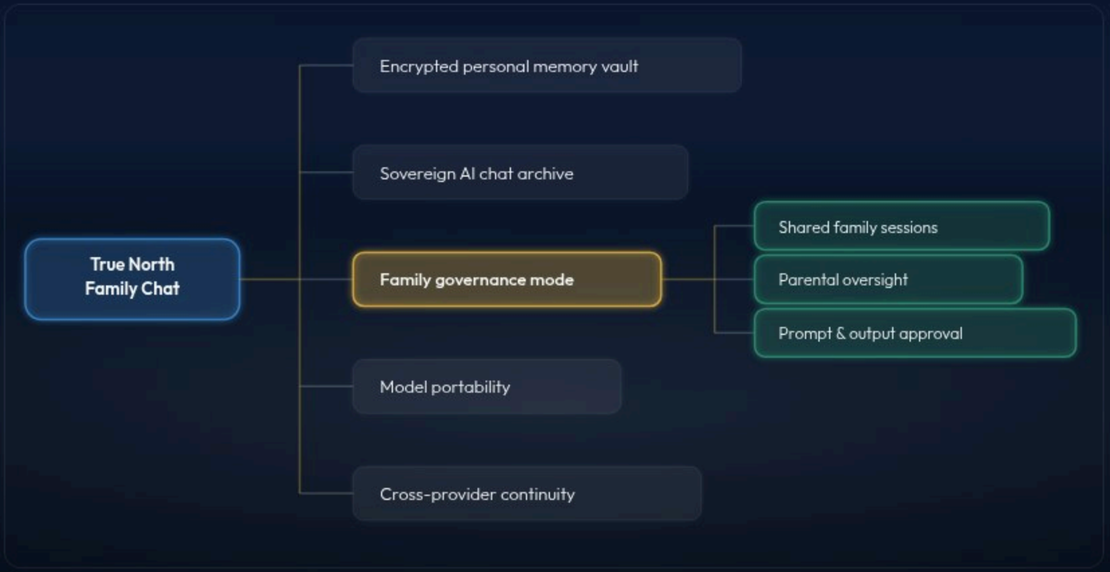
- Family governance mode
- Shared family sessions
- Parental oversight
- Prompt & output approval workflows

> *Not surveillance.* ***Structured continuity.***

FIRST EXPRESSION: CONSUMER

True North Family Chat

Feature Map



SECOND EXPRESSION: ENTERPRISE

True North Enterprise

Continuity and governance for AI-assisted work.

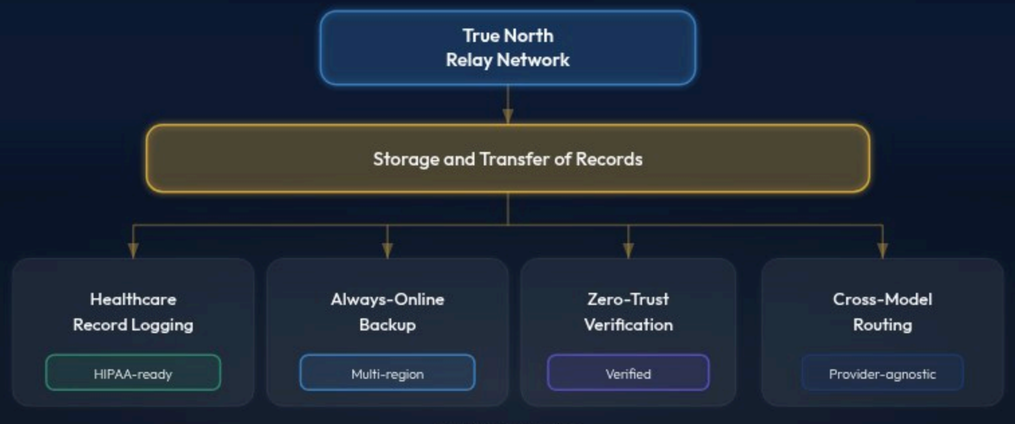
ENTERPRISE CAPABILITIES

- AI interaction audit layer
- Compliance-grade log retention
- Multi-model routing
- Policy enforcement
- Availability guarantees
- Local + distributed redundancy

*From invisible AI use → **institutional memory.***

INFRASTRUCTURE

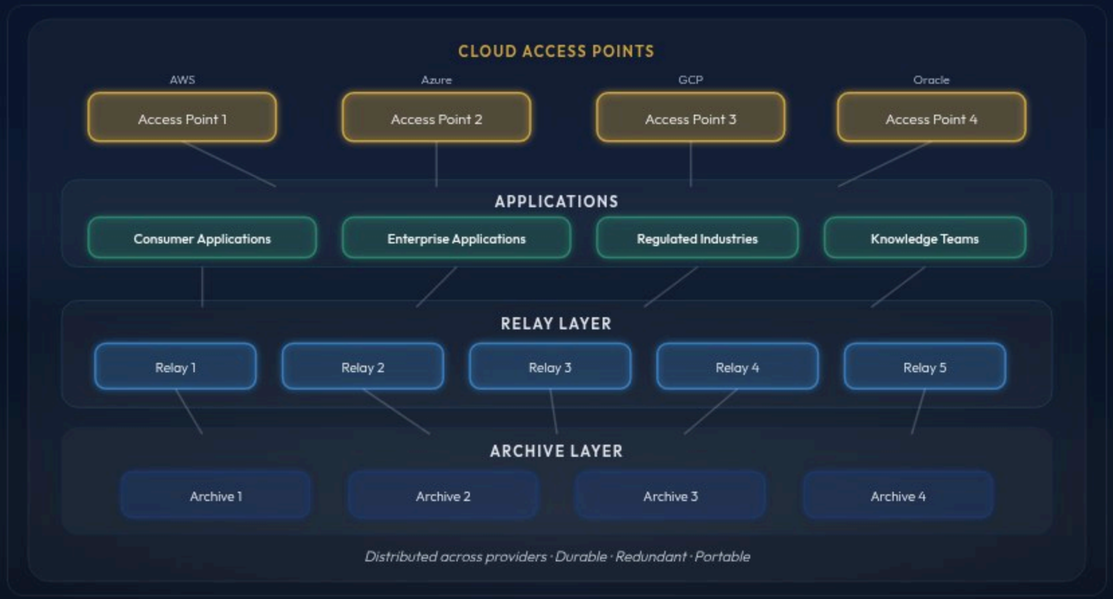
The Relay Network



This is infrastructure.

SYSTEM DESIGN

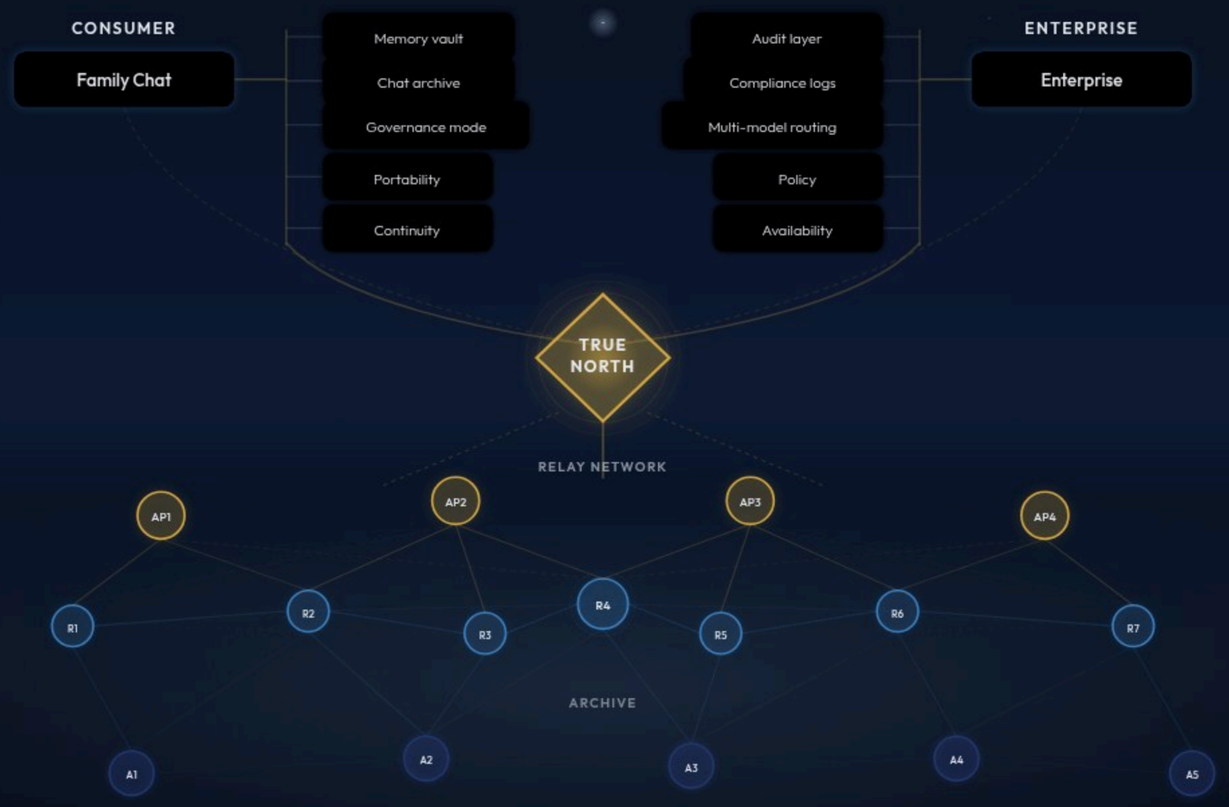
Architecture



Durable. Redundant. Portable.

STRATEGY

Strategic Symmetry



One foundation · Two surfaces · Compounding leverage

Different surfaces. Same foundation.

MARKET BREADTH

Cross-Sector Relevance

REGULATED CONTINUITY
Audit + Retention

Healthcare
Clinical + Admin AI

- Interaction audit logs
- Clinical traceability
- PHI-compliant routing

Legal
Professional Services

- Defensible audit trails
- Prompt history logging

Finance
Banks + Investment

- Explainable AI usage
- Regulatory compliance

Government

KNOWLEDGE COMPOUNDING
Institutional Memory

Tech Teams
Product + Strategy

- Shared AI workspaces
- Decision memory
- Multi-model routing

Engineering
Dev Organizations

- Code-gen audit trails
- Prompt libraries as IP

Consulting
Strategy Firms

- Knowledge compounding
- Review workflows

AI-Native Startups

HUMAN DEVELOPMENT
Continuity + Oversight

Families
Launch vertical

- Governance mode
- Parental oversight
- Shared sessions

Education
Schools + Universities

- AI policy governance
- Longitudinal records

Coaching
Mental Health

- Session continuity
- Supervision layer

Digital Estate

AI is influencing decisions. No structured continuity exists.

Every vertical shares the same gap — that's the wedge.

TIMING

Why Now

- AI adoption accelerating across every sector
- AI actively shaping cognition and decisions
- Enterprises lack governance structures
- Families lack continuity structures
- No one owns the memory layer

Models improve. Memory remains fragmented.

DISCIPLINE

Traction Discipline

We follow signal.

If consumer pulls → **scale consumer**

If enterprise pulls → **scale enterprise**

If both pull → **structure both**

If neither pulls → **pursue strategic absorption**

No premature scaling. Follow traction.

METRICS

Year 1 Objectives

Prove measurable value:

CONSUMER SIGNALS

- Retention
- Willingness to pay
- Organic referral

ENTERPRISE SIGNALS

- Daily active use
- Budget allocation
- Renewal intent

Signal over vanity metrics.

OPPORTUNITY

The Opportunity

AI interaction history is:

- Personally valuable
- Organizationally valuable
- Emotionally valuable
- Strategically valuable

But it has no structured home.

We provide that home.

VISION

A durable memory layer for human–AI interaction.

Across Models · Across Time · Across Platforms · Across Contexts

Trust and continuity for the AI era.
