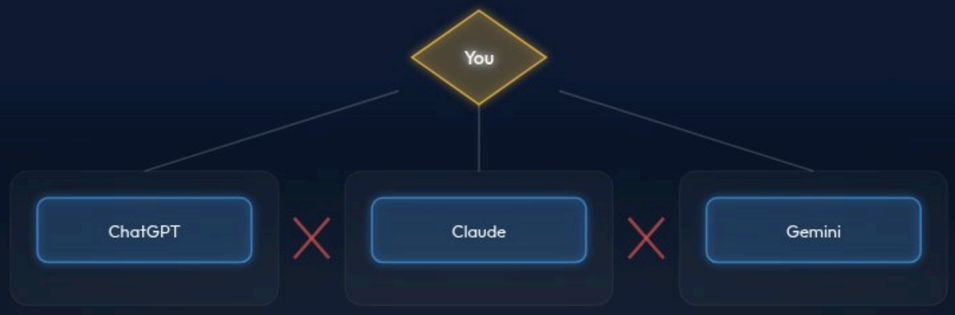
Your AI remembers everything.
Except you.

True North — the memory layer for your AI life

THE PROBLEM

Your AI life is scattered

You use ChatGPT, Claude, Gemini — each starts from zero, each lives in a different silo.



No connection. No memory. No continuity.

THE PROBLEM

Fragile. Temporary. Not yours.

What happens when a provider shuts down or changes terms?

Who actually owns your insights and breakthroughs?

Can your family see what AI is teaching your kids?

Does your context follow when you switch providers?

100M+
weekly ChatGPT users alone

0%
of those conversations are meaningfully portable

laws protecting your AI thought logs

Gone?

Locked?

Invisible?

Lost?

Your AI conversations are becoming some of the most important thinking you do. And none of it is yours.

WHAT IF

> What if every conversation you had with any AI — every question, every answer, every breakthrough — was saved, searchable, and yours forever?

INTRODUCING

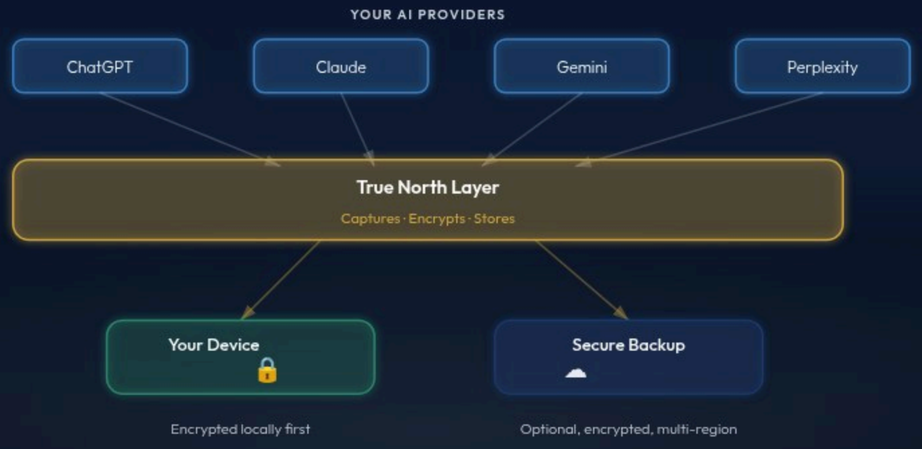
True North Family Chat

One place for every AI conversation. Encrypted, portable, completely yours.

All providers. One memory. Your control.

HOW IT WORKS

Simple by design

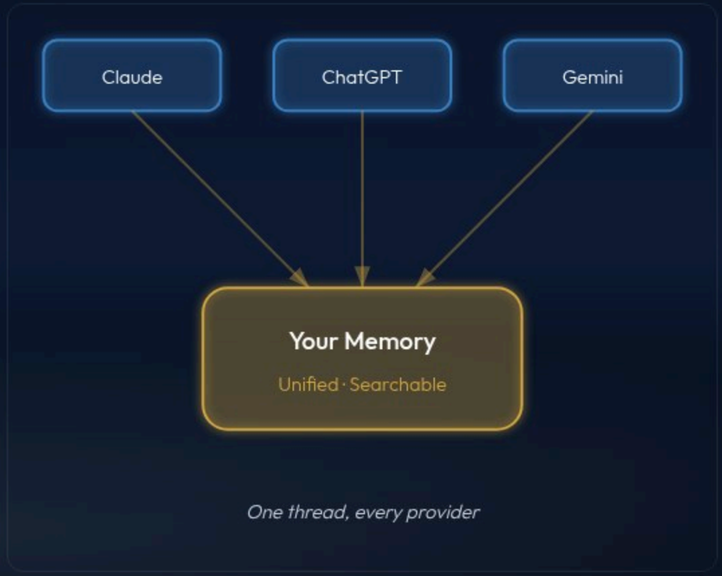


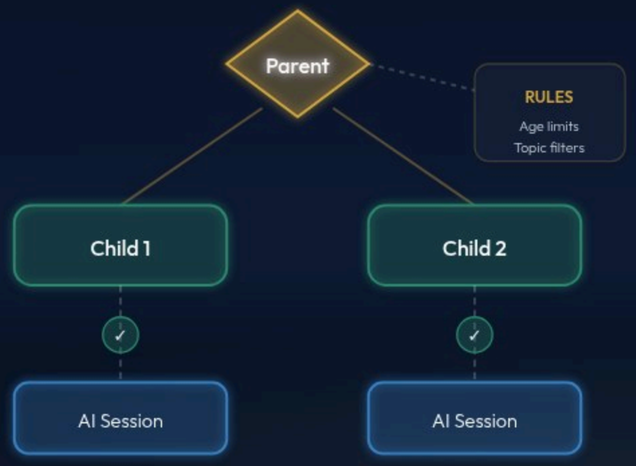
Your data never leaves your control.

FEATURES

One memory across every AI

Ask Claude Monday, continue with ChatGPT Tuesday, pick up with Gemini Friday — True North keeps the full thread.





Visibility without surveillance

FEATURES

Built for families

See what AI teaches your kids. Share sessions. Set rules. Give your family structure without surveillance.

> *Visibility without control. Trust without intrusion.*

FEATURES

Sovereign by default

Encrypted on your device. You choose what to back up. No company reads your data. No algorithm trains on your thinking.

Your thinking. Your data. Your rules.

FEATURES

Switch freely. Lose nothing.

Tired of ChatGPT? Move to Claude. Want to try Gemini? Go ahead. Your history comes with you.

Your history persists across every provider.

REAL LIFE

Everyday moments

PARENTING

Your daughter asks Claude about photosynthesis. That evening you review the thread and continue the conversation together.

SWITCHING

You've used ChatGPT for a year. A better model drops and you want to switch. Every conversation comes with you — instantly.

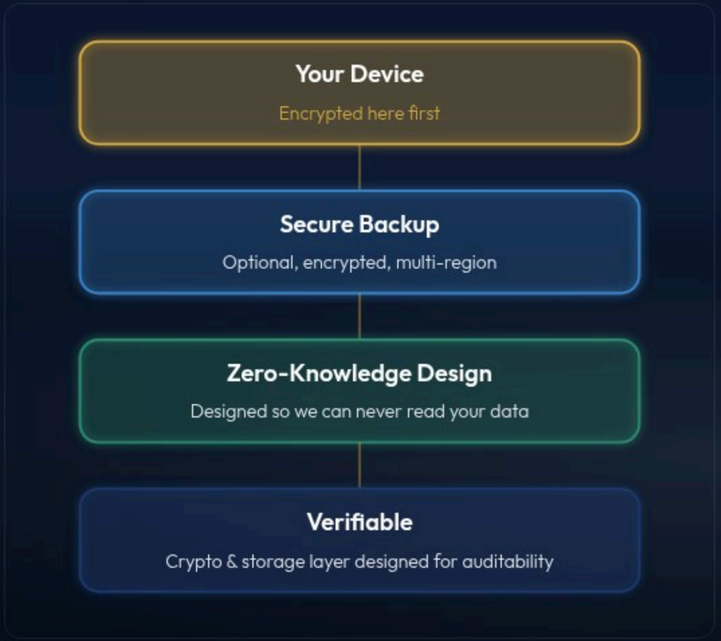
MEMORY

Three years from now, you search "that trip to Japan we planned" and find the whole thread — every detail, every link.

TRUST

How we earn it

"Privacy is not a feature. It's the foundation."



- **Local-first encryption** — your data is encrypted on your device before it goes anywhere
- **Optional backup** — choose if and where your encrypted data is backed up
- **Zero-knowledge architecture** — designed so even our servers cannot decrypt your conversations
- **Verifiable** — encryption and storage layers designed for independent audit

FOR THOSE WHO GO DEEPER

Your conversations are artefacts

You run multiple models at once. You accumulate thousands of threads — ideas, decisions, breakthroughs. These aren't disposable chats. They're records of two intelligences thinking together about what matters to you.

PRECISE MEMORY

Explicit, structured management of your conversation history. Search, tag, annotate. Always clear what's saved, where, and why.

MULTI-MODEL FLUENCY

Run Claude, ChatGPT, and Gemini in parallel. Compare outputs. Keep every thread in one place — context never lost between models.

GROWS WITH YOU

API access, custom routing, export in any format. Your archive becomes infrastructure — a living knowledge base that compounds over time.

We believe much more can be done to honour these artefacts — and to help you grow from them.

Features on our roadmap — availability varies by launch phase.

THE WEIGHT OF THIS

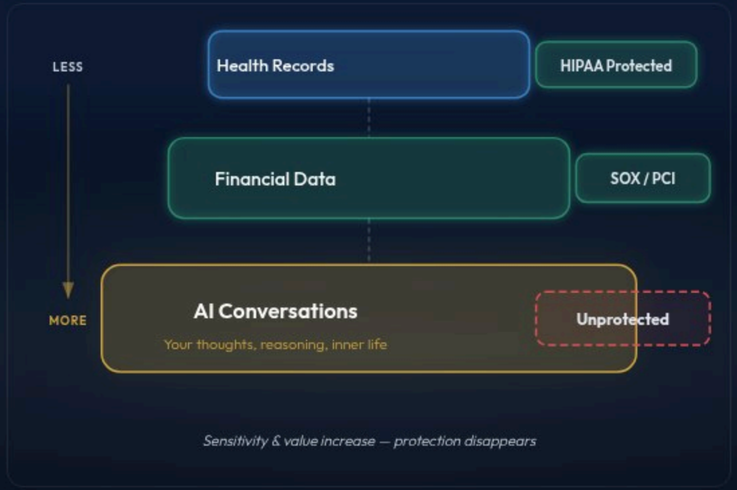
More personal than your medical records.

Your medical records describe your body. Your AI logs describe your **mind**.

HIPAA protects a doctor's notes about you. Nothing protects the thoughts **you actually had**.

Your search history shows what you looked for. Your AI history shows how you **think**.

These logs are the most complete record of human–AI reasoning ever created.



> **Your AI conversations are humanity's most undervalued asset class — and right now, they belong to everyone except you.**

> **Your AI conversations are becoming some of the most important thinking you do. They deserve a home.**

Across Models · Across Time · Across Platforms · Across Your Family

True North. The memory layer for your AI life.
