True North Systems

When Your Backup Data Gets Stolen, Then What?

Operational Brief for Hospital CIOs

Confidential · 2026

THE PROBLEM

Immutable Backups Don't Stop Theft

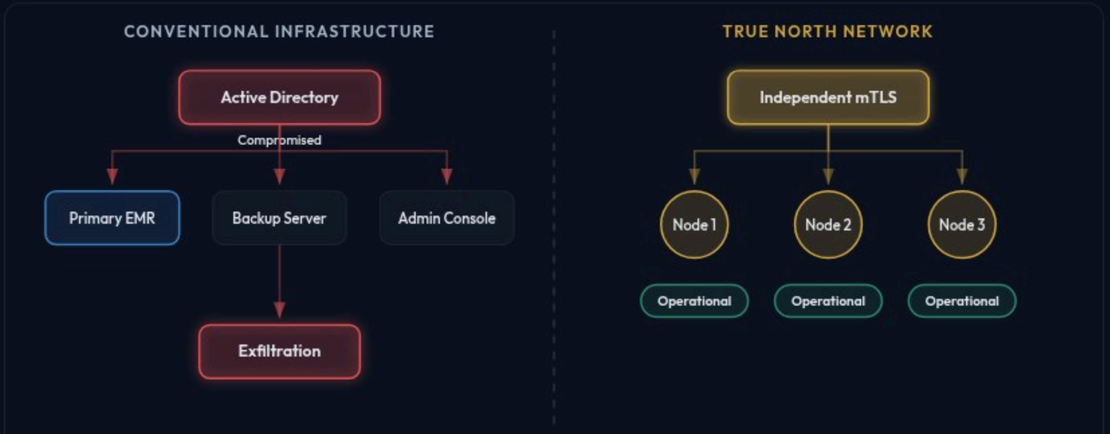
Extortion-only attacks rose from 4% to 12% in three years. When backup data is exfiltrated, recovery doesn't help.

> *Recovery doesn't undo theft.*

WHY THIS HAPPENS

Active Directory Is the First Target

Our network operates on separate key material in a separate security perimeter.



When AD falls, everything tied to it falls. Our network doesn't.

THE ARCHITECTURE

Distributed, Key-Split Archive

AES-256-GCM encryption. Key split across independent nodes. Minimum four compromised simultaneously to reconstruct.

CAPABILITIES

Exfiltration Protection + Ransomware Resilience

Exfiltration Protection

A breached archive node yields ciphertext and a key share. Neither is useful alone.

Ransomware Resilience

If your primary EMR goes down, the archived ADT feed reconstructs a functional secondary EMR — a current patient census.

CAPABILITIES

Aggressive Protection + Visible Verification

Aggressive Protection Posture

We are a secondary system. If we detect an intrusion, we shut the affected node down immediately — zero clinical impact.

Visible Verification

A live display showing your records being archived in real time. Click-to-verify any record. Every inspection is audit-logged.

COMPLIANCE & COST

Reduced Exposure, Reduced Cost

HIPAA Safe Harbor (HR 7898) incentives for recognized security practices. Reduced storage costs because we do not carry primary EMR SLA overhead.

$9.9M

GETTING STARTED

What a Pilot Looks Like

ADT feed access. Data flowing in days. Integrates alongside existing backup infrastructure — not instead of it.

1

Clinical operations from secondary EMR during simulated outage

2

On-demand record verification

3

Demonstrably improved security posture for board and auditors

STATUS

What's Built Today

BUILT

The relay network architecture pattern and ADT ingestion capability.

IN PROGRESS

Production Shamir's Secret Sharing key-splitting and the full verification interface.

We will not over-claim.

NEXT STEP

The Cost of Inaction

Breach costs exceed annual pilot cost. HIPAA enforcement is specifically targeting ransomware preparedness. Our annual cost is a fraction of a single breach.
