Go to Market

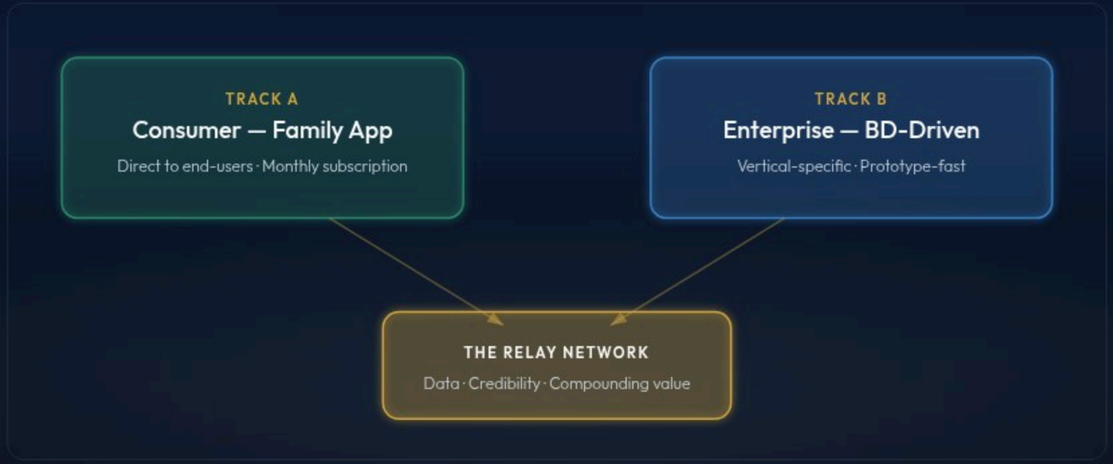
Two tracks. One network. First customers.

True North Systems · 2026

OVERVIEW

The Strategy

Two parallel tracks feeding one network. Consumer validates. Enterprise monetizes. The network compounds.



> *The family app is the wedge. The network is the moat.*

TRACK A

The Family App

Goal: first paying customer.

TARGET USERS

- Families who care about AI continuity & oversight
- Power-users who want governed, persistent AI
- Parents navigating AI with their kids

THE MODEL

- Monthly subscription — simple, recurring
- Shared family sessions with parental controls
- Positioning pivot: power-user app if that's where pull is

> *The family app is the wedge into the network.*

COMMUNITY-FIRST

Consumer Acquisition

Trust-based channels. No paid ads. Authentic pull.

CHURCH PRESENTATIONS

- AI education talks at local churches
- "How to relate to AI as a family"
- Already have explicit interest from church moms
- Marcus drives product + presentations
- High-trust, high-conversion audience

AFFILIATE FUNNEL

- Channel codes for marketer friends
- High commission, performance-based
- Low-cost, scalable distribution
- Attribution tracking built in

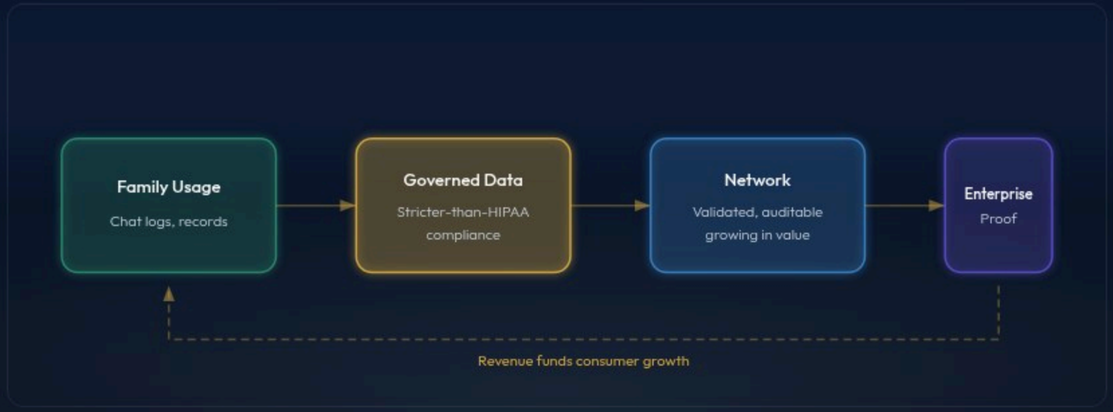
ORGANIC PULL

- Word-of-mouth from power-users
- Product quality drives referral
- Network effects compound

THE FLYWHEEL

Data Compounds

Consumer users generate data. Data validates the network. The network sells enterprise.



> *Consumer traction is enterprise proof. Every family chat log is a governed, auditable record.*

TRACK B

Enterprise BD

BD-driven exploration. Find the low-hanging fruit. Prototype fast.

THE TEAM

- Two committed senior sales professionals
- Different profiles, complementary networks
- They explore and develop use-cases
- Find which verticals have the shortest sales cycle

THE PROCESS

- Explore verticals in parallel
- At any indicator of interest → build prototype
- Deploy fast, measure signal
- Focus: strongest product-market fit

> *At any indicator of interest — build prototype, deploy fast.*

WHERE WE WIN

Enterprise Sweet Spot

Industries where the network's properties are non-negotiable.

REQUIREMENTS

- **High availability** — always on, no single point of failure
- **High compliance** — regulated industries, strict governance
- **Valuable records** — where data matters and must persist
- **Costly breaches** — where the downside is severe

TARGET VERTICALS

Healthcare | Legal | Finance | Government

- Each vertical needs only a thin application layer on top
- The secret sauce is in the network

> *The secret sauce is in the network — each vertical needs only a thin layer on top.*

EXECUTION

Speed Advantage

Core software developed and proven locally. Each vertical is a thin layer on top.

BUILT ALREADY

- Core software and POC developed
- Relay network proven locally
- Next step: deploy to production

BUILD CHEAP

- Thin application layer per vertical
- Explore without boiling the ocean
- Test real demand, not theory

WIN FAST

- First to prove PMF in any vertical wins
- Speed + existing infra = compounding lead
- Each win makes the next easier

PHILOSOPHY

Follow the Signal

Signal-driven, not assumption-driven. We don't pick the market — the market picks us.

If family app pulls → scale it

If a vertical pulls → double down

If neither pulls → iterate on consumer applications until we find something unique enough

> *No premature scaling. Follow traction.*

YEAR 1

What We're Watching

Clear signals tell us what's working. We measure, then commit.

CONSUMER SIGNALS

Retention · Willingness to pay · Organic referral

ENTERPRISE SIGNALS

Daily active use · Budget allocation · Renewal intent

CONSUMER MILESTONE

First paying family customer = validation

ENTERPRISE MILESTONE

First prototype deployed = proof

ACQUISITION

The Funnel

TOP OF FUNNEL

Church talks · Affiliate links · Organic

MIDDLE

Free trial · Onboarding

CONSUMER

Monthly subscription

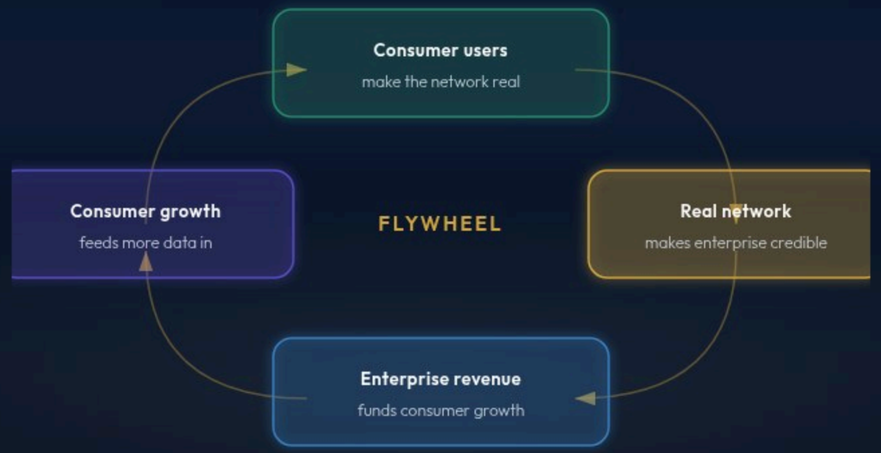
ENTERPRISE

Pilot program

Channel codes track attribution across all stages

REINFORCEMENT LOOP

Why This Works



THE LONGER GAME

What Consumer Traction Unlocks

Beyond the flywheel — what opt-in consumer data makes possible.

GOVERNED DATA AS ASSET

- Chat logs and memories, stored at stricter-than-HIPAA compliance
- With user consent and opt-in, this data becomes training-grade
- Users are already generating it — we just need the consent layer

HUMAN FEEDBACK AT SCALE

- Consumer app users rate responses, give feedback — real RLHF
- Opt-in participation turns everyday usage into training signal
- Demographic tracking of contributors opens new dimensions

HYPER-LOCAL MODELS

- Geographic and cultural demographics of human feedback
- Local model fine-tuning — AI shaped by your part of the world
- End state: community-shaped, regionally tuned AI models

> *"The consumer app isn't just the wedge — it's the training ground. Traction first, then this unlocks."*

Two tracks. One network.

We follow the signal.
